/destroyed; RNA source leukocytes from anonymous pool of
non-activated adult donors. Library is oligo-dT primed
and directionally cloned (EccRV site is destroyed upon
cloning). Average insert size 1.7 kb, insert size range
1.2-3.3 kb. Library is normalized and enriched for
full-length clones and was constructed by C. Gruber
(Invitrogen). Research Genetics tracking code 027. Note:
this is a NIH_MGC Library."
pBlueScript backbone); Site 1: BamHI; Site 2: BglII; RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.rmdb.iastate.edu' and follow the links for RescueMu. Grid AA was grown at UC San Diego in 2002. DNA was extracted from leaf strips, double digested using BHHIOB cells were transformed and then screened on LB plates with amplicillin."

(coil Birtain Ail-Ocold, 'l-Tesistant, F-" / (note="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/64 (male) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gal electrophoresis. Vector DNA was prepared from a derivative of pwd4732114|gb|AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Xil0-Gold (Stratagene) cells and selected for ampicillin resistance."

/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamH1; Site 2: Bg11;
RescueMu is a 4.9 kb, modified maize Mu transposon
designed to allow plasmid rescue from total genomic DNA.
Mu elements insert preferentially into transcription
units: For more information on RescueMu, go to the web
site 'www.zmdb.iastate.edu' and follow the links for
RescueMu. Grid M was grown at University of Arizona in
2001. DNA was extracted from leaf punches, double digested
using BamH1 and Bg111, and ligated to form circular
plasmids. DH10B cells were transformed and then screened
on LB plates with ampicillin."

                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                      Laboratory Mouse DNA Resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligomucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gi|4732114|gb|RP129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent B. coli XL10-GG1d (Stratagene) cells and selected for ampicillin resistance."

/note="Organ: pooled; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site 1: Not 1; Site 2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI CGAP GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries The pools consisted of I.M. AGE. Clones 297480-302087, 6826312-687239, 76408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "

Sequence 11, Application US/09249585A

Patent No. 6417002

GRENAL INFORMATION:
TITLE OF INVENTION: METHOD FOR MAINTENANCE AND SELECTION OF EPISOMES
TITLE OF INVENTION: METHOD FOR MAINTENANCE AND SELECTION OF EPISOMES
CURRENT APPLICATION NUMBER: US/09/249,585A

CURRENT FILING DATE: 1999-02-11

NUMBER OF SEQ ID NOS: 18

SEQ ID NO 11

LENGTH: 33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ..

Sequence 1, Application US/08650726

Sequence 1, Application US/08650726

Patent No. 6027721

GENERAL INFORMATION:
APPLICANT: Hammang, Joseph P
APPLICANT: Aebischer, Patrick
ITLE OF INVENTION: DEVICE AND METHOD FOR ENCAPSULATED GENE
ITLE OF INVENTION: THERAFY
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSEE: FISH & NEAVE
STREET: 1251 Ave. of the Americas
CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   65.8%; Score 15.8; DB 3; Length 33;

Sequence 5, Application US/09258689
; Sequence 5, Application US/09258689
; Patent No. 6451527
; GENERAL INFORMATION:
; APPLICANT: Larocca, David
; APPLICANT: Baird, Andrew
; APPLICANT: Baird, Andrew
; APPLICANT: Baird, Andrew
; TITLE OF INVENTION: METHODS USING GENETIC PACKAGE DISPLAY FOR
; TITLE OF INVENTION: SELECTING INTERNALIZING LIGANDS FOR GENE DELIVERY
; FILE REFERENCE: 760100, 430C3
; CURRENT APPLICATION NUMBER: US/09/258,689
; CURRENT FILING DATE: 1999-02-26
; NUMBER OF SEQ ID NOS: 10
; SSOTHARE: Patentin Ver. 2.0
; SEQ ID NO 5
; LENGTH: 47
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | GENERAL INFORMATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 17, Application US/08217082A

Patent No. 5734033

GENERAL INFORMATION:
TITLE OF INVENTION: ANTISENSE OLIGONUCLEOTIDES FOR INHIBITING THE
TITLE OF INVENTION: GROWTH OF CELLS EXPRESSING THE HUMAN BCL-2 GENE
TITLE OF INVENTION: GROWTH OF CELLS EXPRESSING THE HUMAN BCL-2 GENE
NUMBER OF SEQUENCES:
ADDRESSEE: OBLON, SPIVAK, McCLELLAND, MAIER & NEUSTADT,
ADDRESSEE: P.C.
STREET: 224 Airport Parkway
CITY: San Jose

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 51, Application US/09325193A

Sequence 51, Application US/09325193A

Patent No. 6406705

GENERAL INFORMATION:

APPLICANT: Bavis, Heather L.

APPLICANT: Schorr, Joachim

APPLICANT: Schorr, Joachim

APPLICANT: Schorr, Joachim

APPLICANT: Schorr, Joachim

APPLICANT: Maries, Arthur M.

TITLE OF INVENTION: Unmethylated CpG Dinucleotide as an Adjuvant

TITLE OF INVENTION: Unmethylated CpG Dinucleotide as an Adjuvant

FILE REFERENCE: C1039/7025/HCL

CURRENT APPLICATION NUMBER: US 09/154,614

PRIOR FILING DATE: 1998-09-16

PRIOR FILING DATE: 1998-03-10

PRIOR FILING DATE: 1998-03-10

NUMBER OF SEQ ID NOS: 98

SEQ ID NOS: 98

LENGTH: 18

Sequence 21, Application US/09835371

Patent No. 6905820

GENERAL INFORMATION:

APPLICANT: ULLMANN: Eugen

APPLICANT: WILL, David W

TITLE OF INVENTION: POLYAMIDE NUCLEIC ACID DERIVATIVES, AND AGENTS AND

TITLE OF INVENTION: PROCESSES FOR PREPARING THEM

TITLE OF INVENTION: PROCESSES FOR PREPARING THEM

TITLE OF INVENTION: PROCESSES FOR PREPARING

CURRENT APPLICATION NUMBER: US/09/835,371

CURRENT ELLING DATE: 2001-04-17

NUMBER OF SEQ ID NOS: 53

SOFTWARE: PALENTIN Ver. 2.1

SEQ ID NO 21

LENGTH: 18
                                   NUMBER OF SEQUENCES: 132

OTHER INFORMATION: Oligonucleotide
OTHER INFORMATION: Description of Artificial Sequence:
OTHER INFORMATION: oligonucleotides, linkages between positions
OTHER INFORMATION: to 18 are phosphorothioates, linkages between
OTHER INFORMATION: positions 18 to 26 are phosphodiesters
OTHER INFORMATION: positions 19 to 29 carry 2'-OCH3 modified ribosyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 12, Application US/09817387
Patent No. US20010039263A1
